

TRADE-LAM

Laminating Film

A premium grade laminating film that provides high clarity and a lower melting temperature (230 to 250 Degrees). Copolymer adhesives help speed the laminating process and provide aggressive bonding. Trade-Lam is made with a premium polymer adhesive that won't cloud, fog, crack peel or fade. The adhesive layer features high performance copolymer resins designed to achieve excellent adhesion to a wide variety of natural and synthetic stocks. Trade-Lam adheres to porous, semi-gloss and gloss paper media with light to heavy ink coverage. The lower melting temperature makes this a better choice for laminating ink jet prints. The crystal clear finish makes any print jump to life.

Trade-Lam Commercial CoPolymer Laminating Film

- ◆ Our premium grade film
- ◆ Available in 1" and 2 ¼" cores
- ◆ Combines high clarity with a low melting temperature
- ◆ Copolymer adhesives speed the laminating process and adhere to many surfaces standard grade film will not
- ◆ Melting temperature of 230°- 260°
